Search Notes

Examiner Joyce,

Here are the results of the search you requested.

Please feel free to contact me if you have any questions.

Edward Hart

THIS PAGE BLANK (USPTO)

Protein Sèquence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file
 extension .rup) that can no longer be found in the database, the permanent record with the new
 accession number can be found by searching the old accession number in the UniProt Protein
 Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession

THIS PAGE BLANK (USPTO)

Pending Nucleic Acid and Pending Amino Acid database searches generate two sets of results each. The Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions Pending databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches. .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions rapm and rapm

Because they contain data that is confidential, the results of Pending database searches should not be left in the case.

---------------------------------	----------------------------------

> I am an examiner in Workgroup:	Example: 1610
> Relevant prior art found, search results used a	as follows:
102 rejection	•
☐ 103 rejection	
Cited as being of interest.	
Helped examiner better understan	d the invention.
Helped examiner better understan	d the state of the art in their technology.
Types of relevant prior art found:	
☐ Foreign Patent(s)	
Non-Patent Literature (journal articles, conference proceeding)	gs, new product announcements etc.)
> Relevant prior art not found:	
Results verified the lack of relevant prior a	art (helped determine patentability).
•	tentability or understanding the invention.

                                                                                                                                                              Vrielink A.;

"The structure of L-amino acid oxidase reveals the substrate trajectory into an enantiomerically conserved active site.";

EMBO J. 19:4204-4215(2000).

EMBO J. 19:4204-4215(2000).

C. !- FUNCTION: Catalyzes an oxidative deamination of predominantly hydrophobic and aromatic L-amino acids. Has an antibacterial effect and an ability to induce apoptosis. The H(2)O(2) produced by L-amino acid oxidation is involved in the apoxin-I induced apoptosis and hemorrhage caused by the venom.

C. I. CATALYTIC ACTIVITY: An L-amino acid + H(2)O + O(2) = a 2-oxo acid + H(3) + H(2)O(2).

C. I. COFACTOR: FAD.

C. I. SUBUNIT: Homodimer.

C. I. SINILARITY: Belongs to the flavin monoamine oxidase family.

Strong, to mammalian FIGI.
                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright. "Primary structure of the snake venom L-amino acid oxidase shows high homology with the mouse B cell interleukin 4-induced Figl protein."; Biochem. Biophys. Res. Commun. 248.476-498 [1998].
-!- FUNCTION: Catalyzes an oxidative deamination of predominantly hydrophobic and aromatic L-amino acids. Has an antibacterial effect and an ability to induce apoptosis. The H(2)0(2) produced by L-amino acid oxidation is involved in the apoxin-1 induced apoptosis and hemorrhage caused by the venom.
-!- CATALYTIC ACTIVITY: An L-amino acid + H(2)0 + O(2) = a 2-oxo acid + NH(3) + H(2)0(2).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1

The protein (apoptosis inducing protein, AIP) is isolated from chub mackerel. The protein can be used as an anticancer agent and as a reagent for study of the mechanisms of apoptosis in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cell death; apoptosis; inhibition; proliferation; cancer cell; apoptosis inducing protein; AIP; chub mackerel; anticancer.

amino acid oxidase having a fully defined amino acid sequence of 523 amino acids as given in the specification and L-amino acid oxidase activity. The invention may be useful for the production of compounds with an antibacterial activity. The invention is useful in preparing an antibacterial sterilisation composition as a hydrogen peroxide supply component. The invention is useful for preventing, treating bacterial infections such as sexually transmitted disease in the breast of livestock, for example mastitis, and provides an antimicrobial effect. The present sequence is that of the mouse L-amino acid oxidase protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             363

The YTFO3 cDNA is distantly related to a family of enzymes which include monoamine oxidases, but the

                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated polynucleotide, which encodes a human immediate early interleukin-four (IL-4) induced protein. The activity of the polynucleotide of the invention may be described as cytostatic, antifungal, antibacterial, immunomodulator, antiinflammatory, dermatological and immunosuppressive. The polynucleotide or antisense of Algonucleotide is useful for the manufacture of a medicament for preventing, treating or ameliorating a medical condition, particularly immune related disease, tumour, fungal infection or bacterial infection. The immediate early IL-4 induced protein is useful for the manufacture of a medicament for killing unwanted cells in a mammal. The antagonist is a useful for the manufacture of a medicament for killing unwanted cells in a mammal. The antagonist is cuseful for the manufacture of a set in decreasing cell condition, particularly an immune related disease. These diseases may condition, particularly an immune related disease. These diseases may condition battenic lupus erythematosus, inflammatory bowel disease, condition. Battenic lupus erythematosus, inflammatory bowel disease, dullain-Batter syndrome, Whipple's disease, atopic dermatitis, food hypersensitivity, rheumatoid arthritis, osteoarthritis, diabetes mellitus and psoriasis. The polynucleotide of the invention may be used in gene therapy. The current sequence represents the mouse immediate early
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

 translation product does not have the key residues which covalently bind the PAD cofactor. and so may not exhibit monoamine oxidase activity. The cellular types which express messages encoding YFF03 suggest that signals important in cell differentiation and development are mediated by them. The invention provides a process for recombinant production of YFF03, host cells, expression vectors and specific antibodies. The products can be used for detection, diagnosis, development of therapeutic methods and

against proteins expressed in neoplastic cells, useful for tumor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents human PRO1265 (UNQ636), a 62.9 kDa protein (pI 8.97) encoded by the novel cDNA clone DNA60764 (see AAX87257).

Amplification of DNA60764 occurs in various lung and colon tumours and cell lines, suggesting a significant role in tumour formation and growth Antagonists (e.g. antibodies) directed to PRO1265 may have use in cancer therapy. The invention identifies 14 genes (see AAX87254-67) that are amplified in the genome of tumour cells. Such amplification is expected to be associated with overexpression of the gene product and to contribute to tumorigenesis. The encoded proteins (see AAV06477-90) may be useful targets for the diagnosis and/or treatment (including prevention) of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies that bind the proteins are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121

                                                                                                                                                                                                                                                                                                                                                                                                                          AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention
                                                                                                                                                                                                                                                                                                                                             small
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                            6
                             specification describes novel polypeptides designated PRO201, PRO292, PRO312, PRO1015, PRO1017, PRO313, PRO1017, PRO1017, PRO1017, PRO1012, PRO1017, PRO5101, PRO509, PRO503 and PRO502. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognesis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and proliferation in
                                                                                                                                                                                                                                         121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of antisense KNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nuclacids may also be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SFAEALRAHSCLSDRLQYSRIVGGWDLLPRALLSSLSGLVLLNAPVVAMTQGPHDVHVQI

Twenty eight nucleic acids encoding PRO!polypeptides which are useful for treating various tumors, e.g. breast cancer, and other inflammatory, angiogenic and immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         301
                                                                                                                                                                                                        The present sequence is one of twenty eight novel PRO polypeptides. The PRO polypeptides and their agonists, including antibodies, peptides, and small molecule agonists, may be used to treat various tumours, e.g., cancers such as breast cancer, ovarian cancer, renal cancer, colorectal cancer, uterine cancer, prostate cancer, lung cancer, bladder cancer, contral nervous system cancer, melanoma or leukaemia. They are also useful for treating other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ALSEMIYDQADVNDSVTYHEVTGGSDLLPEAFLSVLDVPILLNSKVKHIRQSDKGVIVSY 301

             of the 275 sequences are also useful to stimulate the release of tumour differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from cartilage, the proliferation of inner ear utricular supporting cells or of Thymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCS), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor vIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polypucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; angiogenesis; cardiant; cytostatic; antiangiogenic; hypotensive; vulnerary; antiarteriosclerotic; PRO agonist; PRO antagonist; trauma; gene therapy; cardiovascular disorder; endothelial disorder; cancer; angiogenic disorder; cardiac hypertrophy; atherosclerosis; hypertension; age-related macular degeneration; arterial restenosis; angina;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAU12172-AAU1246 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Deforge L, Desnoyers L, Filvaroff E, G

The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Interleukin-four induced protein; IL-4; cytostatic; antifungal; antibacterial; immunomodulator; antiinflammatory; dermatological; immunosuppressive; immune disease; tumour; fungal infection; bacterial infection; systemic luune-rythematosus; inflammatory bowel disease; Guillain-Barre syndrome; Whipple's disease; atopic dermatitis; food hypersensitivity; rheumatoid arthritis, osteoarthritis; diabetes mellitus; psorlasis; gene therapy; human.
